A close-up photograph of a green leaf, showing a dense network of veins in a lighter green color against a darker green background. The veins form a complex, branching pattern across the entire surface.

SUSTAINABILITY

Commitment to Product Transparency

LIVING FUTURE
CORPORATE MEMBER

The International Living Future Institute (ILFI), an environmental nonprofit, envisions a more sustainable future that is ecologically restorative, socially just, and culturally rich. Their flagship program, the Living Building Challenge (LBC), provides a road map to this regenerative vision. ILFI's certifications and transparency platforms are intended to guide the way towards a "living future".

Declare is a platform that enables transparent disclosure and discovery of healthy building products. Manufacturers voluntarily provide detailed product information on easy-to-understand labels, which list ingredients and use color-coding to flag chemicals of concern. The labels also report the product's assembly locations, life expectancy, end-of-life options, and Living Building Challenge (LBC) compliance.

The free, searchable Declare database allows designers, owners, and homeowners to specify trusted products that meet green building certification requirements like Core Green Building, LBC, LEED, and WELL. Declare has positively transformed the materials marketplace, enabling the construction of buildings that prioritize health.

RED LISTED

Harmful to Living

The **Red List** is a list of chemicals representing the “worst in class” substances

The LBC Red List catalogs substances prevalent in the building industry that pose serious risks to human health and the environment. Organized by chemical class and identified by their Chemical Abstracts Service Registry Number (CASRN or CAS Number), the Red List has been an intuitive tool since 2006 for communicating the need to stop using harmful chemicals.

The Red List is regularly updated to include or remove certain chemical classes based on their potential to harm human health and the environment. These chemicals may pose a range of hazards, such as cancer, reproductive toxicity, organ damage, endocrine disruption, persistence in the environment, and ozone depletion.

Examples of Red Listed Chemicals are Formaldehyde, Asbestos, Mercury, Chloroprene, Halogenated Flame Retardants, and PVC.

Comprehending Red List and Watch List to help consumers make informed decisions

Red List

Priority List

Watch List

Red List vs. Watch List

The Red List: An enforceable screening guide that contains 800 unique CAS numbers representing the “worst in class” materials commonly used in today’s building industry. The commonly used chemicals on the Red List pollute the environment, bio accumulate up the food chain to toxic concentrations, and harm construction and manufacturing workers.

The Priority List: To be added to the Red List, a chemical must first be designated as “Priority” for at least 12 months. When a chemical has this Priority for Red List Inclusion designation, it will be flagged in light orange on the Declare label, but this does not affect the product’s overall Declaration Status.

The Watch List: The LBC Watch List serves as a warning to manufacturers and project teams that certain chemicals identified by ILFI may soon be added to the more restrictive LBC Red List. While inclusion on the Watch List does not affect a product’s Declaration Status or prevent its use on LBC projects, it signals that the product could be prohibited in the near future if those chemicals are ultimately added to the Red List.

A close-up photograph of a tree branch with green buds and leaves, set against a bright, sunlit background. The branch is dark and textured, with several green buds and leaves emerging from it. The background is a soft, out-of-focus mix of green and yellow, suggesting a sunny day in a garden or forest.

UNDERSTANDING YOUR LABEL

Making Informed Choices

A Declare Label

is the nutrition label for products

Ingredients: Categorized and displayed by their respective components. Unrestricted ingredients are shown in grey, Red List chemicals appear in red, and Watch List Priority List chemicals are indicated in light orange.

Declaration Status: Verifies that product complies with Living Building Challenge Red List.

Declare Identifier: The program sets a 12-month expiration date for product listing, ensuring continuous monitoring and compliance.

End-of-Life Options: Take-back programs can divert materials from landfills and hazardous waste streams by recovering items that are salvageable, reusable, or recyclable.

Disclosed % Value: Represents the product's disclosure threshold required to meet building certification credit standards.

Third Party Verification Badge: Indicates that a professional third-party assessor has validated the accuracy of the manufacturer's supply chain, purchasing practices, ingredient claims, compliance with Living Building Challenge standards, and reported embodied carbon data.

A close-up photograph of a butterfly with vibrant blue wings and black borders, resting on a large green leaf. The butterfly's wings are spread, showing intricate patterns and small white spots along the edges. The leaf's veins are clearly visible, creating a textured background.
